# Architecture School

Architecture is the art of designing buildings. Any good University campus needs a variety of buildings to house different departments and activities. They can be weird, but they need to provide shelter and protection, from the elements, so they need a roof and walls. Let's design some original buildings for SPU!

**What is this building used for?** (Studying a subject? Playing a sport? Doing research? something else?)

**What makes this building special?** (The way it looks? The way it works? Something it has inside?)

**What materials is it made of?** (Metal? Glass? Brick? Concrete? Mud? Wood? Canvas? Plastic?)

**Draw your building here!** What features does your building have? (Windows? Doors? Spires? Stairs?)

**Bonus challenge!** On the back, write a pitch convincing the University to build your building. Explain why it needs to be built, how you will build it, and why YOU are the right architect to build it!
